Things to consider about vehicle maintenance

By: [Urvi Tandon](#)

Vehicle maintenance is a process in which vehicles are properly inspected and checked on a regular basis. In such a process, servicing of vehicular parts is done and fluid levels are checked. Such maintenance is necessary to ensure that the vehicle is safe for long distance travels, reliable enough, drivable and comfortable at the same time.

### **Scheduling of a Vehicle Check:**

The vehicle maintenance needs to be scheduled regularly. The scheduling depends upon various factors like the year of make, the model of the automobile and its exact driving condition. Regardless, it is important for the owner of the car to go for a regular check-up of the vehicle.

### **Common Tasks to Take Care Of:**

*Commonly, in regular vehicle maintenance the following tasks are taken care of:*

- Car wash: Generally a car wash and cleanup is provided by the maintenance firm. This is much of a complimentary service added on with the more technical stuff.
- Engine Oil Levels: Cars go bad mostly due to faulty oil levels. Therefore when a check-up is scheduled, engine oil levels should be closely looked at.
- A check on Fuel Filters: Fuel filters work continuously for any fuel engine car. Therefore it is very important that the fuel filter is checked thoroughly when the car goes for a maintenance check. Fuel filters need to be checked by a professional only as the pressure involved may be dangerous. It is one of the important things to remember.
- Wheel and Tire Alignment: Regardless of the tire being used currently, sooner rather than later, new tires are needed for the cars. Regular checks can help the cause well. Wheel alignment is another part of the vehicle which needs to be taken care of while the car is in servicing.
- Battery Check: Car battery needs a pro-active check. Even if the car is working fine, precautions need to be taken through regular maintenance, in order to avoid any battery problems that may occur in future. Typically in 48-60 months, a close look at the battery is required.
- Spark Plugs Check: Spark Plugs have now advanced a lot since cars have become more and more technically sophisticated. However, maintenance is still required of the spark plugs in order to get the automobile in the right condition.
- Electronics test: Anti-Lock Braking Systems and other electronic equipment need to be taken care of while the vehicle remains in maintenance. Electronics go wrong more often than any other vehicle part.
