Sighting of Planet X stirs Domsday Theories

Hollywood, MD - Are you ready? - Planet X, (AKA Planet Nine, or Nibiru) is here.

Some conspiracy theorists have surmised that in December 2016 the world will end. How will it happen? Theorists predict the solar system, NOT nuclear weapons, Russia, or global warming – will ultimately be the destroyer of human existence and thus cause everything on Earth to vanish. Poof!

"Have you heard about Planet X and the potentials?"... PLANET X IS LIKELY TEN TIMES MORE MASSIVE THAN EARTH. You will not be able to miss it in the night sky.

Lately, I have been asking this question. Only a few people dare to push the envelopes of life and ask more questions, they are the ones that reply "Yes, I have!"

Regardless of whether you believe in conspiracy theories or not--like there was never a space flight to the moon, there are no such things as aliens etc., this is something to read up on and educate yourself.

Some will say, "We have heard this all before!" First, the year 2000 was when Armageddon was coming, so get ready for the end.

In response, people decided to just suck it up and "Party like it's 1999." Well, Purple Rain (Prince) was a smash hit album, and the Earth continued to rotate. There was no Y2K, no gas shortage, computers didn't explode and the country continued to pay taxes in 2000, 2001, 2002 etc. Then the doomsday conspiracy theorists said, they had it all wrong! "We didn't check ALL the facts and read all the ancient texts." Really? Half the truth – gets you what? A lie.

So, the NEXT new conspiracy theory was based on more research and comparison of ancient texts, archeological discoveries, astrology, and psychic predictions from past and present. Now, seekers of the whole truth have a clearer theory and calculated that 2012 was the definite year – "something really, REALLY big is going to happen in 2012," conspiracy theorists said.

However, there was no agreement on "what" exactly was going to happen. Some believed the end of the world was at hand, and others defined 2012 as being about consciousness awakening and transitioning into a new age.

For years now, assumptions on the planet's end have been making headlines, but not based on the horizons and beyond what the naked eyes can see.

How much do you know about what is going on in our sky and the science behind it?

Why, science?

Evidence of an ongoing resurgence of the Planet X cataclysm conspiracy theory followed the publication of new scientific studies in 2014 claiming evidence of a mysterious unnamed planet lurking beyond Pluto. The scientific claims were based on observations of 'gravitational influences' on a group of space bodies termed the "extreme trans-Neptunian objects" (ETNOs) orbiting our Sun beyond the planet Neptune. Conspiracy believers have said, this study demonstrates that NASA and the U.S. government have been aware for decades that the rogue Planet X is coming with catastrophic consequences for humanity.

Think for a moment... What are the levels of damage implications for an object, person, thing or a planetary system as a result of gravitational influence?

Theorists have also leaked secret NASA "Planet Nibiru" files revealing that the agency is aware that the gravitational influence of Planet X had disrupted the orbits of other planets during a previous passage into the inner solar system hundreds of years ago; and that the next disruptive passage into the inner solar system is imminent.

The approach of the mysterious Planet Nibiru is currently sending waves of charged "plasmatic energy particles" through our solar system. The flow of energy will finally disrupt the "core flows" of the Earth and trigger catastrophic changes in Earth's climate.

Conspiracy theory believers have said, NASA embarked on the New Horizons project two years, just after the 1988 publication revealed the existence of Planet Nibiru. The final destination of New Horizons is Planet X, but to prevent mass panic among citizens, NASA (lied) pretended that the destination of the space probe is Pluto and the Kuiper belt.

In the 1990s, the agency pretended it had abandoned the search for Planet X by leaking false information that the latest measurements by Voyager 2 proved that Planet X does not exist. At the NASA, measurements by Voyager 2 showed that the alleged irregularities in the orbits of Uranus and Neptune which led to the Planet X hypothesis were due to overestimation of the mass of Neptune. However, conspiracy theorists report the claim by NASA scientists were a deliberate ruse to cover-up the actual destination of New Horizons beyond Pluto and the Kuiper belt – Planet X.

[Read More](#) and decide for yourself – Push the envelope.

NASA, the Pentagon, and the CIA and the Vatican are aware of the approaching rogue planet. Leaked information, stated the comprehensive report submitted to the White House estimates that about two-thirds of humanity will be wiped out when Planet X induces a pole-shift. The doomsday theory is that two-thirds of survivors will perish over another six months due to starvation and exposure to the elements.
